Summary

Recent Information Systems graduate with hands-on experience in full-stack web development, data analytics, and database systems. Experienced in developing web applications and analytics dashboards using React, TypeScript, Node.js, PostgreSQL, Python, Tableau, and SQL, with experience in data visualization, ETL, and system testing. Eager to apply my technical and analytical skills while continuing to learn and contribute to data-driven software solutions.

Education

President University, Cikarang, Indonesia

Sep 2023 – Aug 2026

Bachelor of Science in Information System – Data Science

- GPA: 3.78 / 4.00
- JABABEKA Scholarship (2nd Rank)

Technical Skills

- **Programming & Web Development:** JavaScript, TypeScript, Node.js, React, ASP.NET Core, Django, REST API, Python, C#
- **Database & Data:** SQL, PostgreSQL, ETL, Data Warehouse
- **Data Analytics & Visualization:** Tableau, Excel, Pandas, ApexCharts
- **Tools & Platforms:** Git, GitHub, Supabase

Work Experiences

PT Teladan Prima Agro Tbk, South Jakarta, Indonesia

Jan 2026 – Jul 2026

IT Intern – Dashboard and Digitalization Section

Tech Stack: Tableau, Django, PostgreSQL, Excel

- Built and refined Tableau dashboards for Preventive Maintenance and Employee Data Comparison by cleaning and restructuring inconsistent raw data, and developed a Python script to automate data transposition and reduce manual processing time.
- Contributed to frontend and backend development of a Django-based Fingerprint Attendance System, implementing unit-based access control, search/filter improvements, UI fixes, and Server-Sent Events for real-time progress synchronization.
- Conducted QA/UAT Test for a mobile and web employee management application, documenting test cases, bugs and OCR accuracy results

PT. Mostrans Global Digilog, East Jakarta, Indonesia

Aug 2025 – Dec 2025

IT Business Analyst Intern

Tech Stack: React, TypeScript, Node.js, GraphQL, Apollo, PostgreSQL

- Developed and maintained a commercial analytics web dashboard using React, TypeScript, Node.js, GraphQL, and PostgreSQL, providing real-time insights into revenue, profit, profit margin, and logistics KPIs while eliminating manual PowerPoint reporting
- Built interactive data visualizations and filtering components using React, TypeScript, and ApexCharts, enabling dynamic performance analysis by shipper, region, and operational unit.
- Designed and implemented a scalable data warehouse using a star-schema model with ETL pipeline processes to aggregate and sync transactional table into the fact table. Optimized PostgreSQL function and complex SQL aggregation reducing execution time from seconds to under 300ms and significantly improving overall dashboard user experiences

Projects

AI Powered Multi-Tenant CRM

[\(Link\)](#)

Tech Stack: ASP.NET Core (.NET 10), React/Vite, JavaScript, PostgreSQL (Supabase), Hugging Face, Midtrans

- Developed a full-stack, multi-tenant CRM system using ASP.NET Core (.NET 10), React/Vite, JavaScript, and PostgreSQL/Supabase as a capstone project with a team of 3 people.
- Implemented an AI Chatbot with tool calling mechanism to be able query CRM data, improving access to ticket and customer information
- Built a Random Forest regression model to recommend optimal ticket assignments per agent based on workload, priority, and historical performance
- Integrated a payment gateway using Midtrans Snap, implementing payment creation, transaction status tracking, and webhook-based payment confirmation
- Designed and implemented the system architecture across React/Vite Frontend, ASP.NET Core (.NET 10) backend, and PostgreSQL database, including the relational data model and schema for users, companies, tickets, comments, attachments, notifications, and payments.

Academic Scheduling Optimization

[\(Link\)](#)

Tech Stack: Python, Tailwind, Django, Pandas, PostgreSQL

- Developed a Django based Web Application with a group of 6 people to improvise scheduling system based on real life study cases, successfully automating the timetabling process.
- Responsible for implementing a machine learning model using Random Forest Classifier to automatically assign over 1000 classes per semester, achieving 87%-90% automation rate while still following lecturer preferences, room and time constraints.

Certifications

AWS Training and Certifications

- Digital Classroom – Practical Data Science with Amazon SageMaker
- Machine Learning Terminology and Process
- Machine Learning Learning Plan

Organizational Experiences

- | | |
|--|---------------------|
| • SetSail BizAccel , President University
<i>Administration & social media PIC</i> | Oct 2024 – May 2025 |
| • President University Faculty Association of Computer Science , President University
<i>Communication Division Member</i> | Nov 2023 – Sep 2024 |

Language Proficiencies

- Bahasa Indonesia: Native
- English: Professional Working Proficiency (Duolingo English Test: 130)
